LIMING737

FULL-STACK SOFTWARE ENGINEER

12 Years of Software Development | GitHub: github.com/liming737-hub

PROFESSIONAL PROFILE

Full-stack software developer with 12 years of hands-on engineering experience building web applications, backend services, automation and self-hosted systems. Experienced across the software lifecycle, from system design and implementation to deployment, troubleshooting and long-term maintenance.

EDUCATION

Bachelor’s Degree

CORE TECHNICAL SKILLS

Go | Python | JavaScript / TypeScript | Vue 3 | FastAPI
REST APIs | Linux | Docker | Nginx | Git | GitHub Actions
SSH | MQTT | Cloudflare | Android / ADB | CI/CD

ENGINEERING EXPERIENCE

Full-stack application development, backend API design, Linux service deployment, automation, networking diagnostics, remote-access systems and self-hosted services. Hands-on experience integrating software with cloud infrastructure and devices, and using automated testing and CI/CD workflows to improve reliability.

SELECTED PROJECT EXPERIENCE

Open-source and private engineering projects spanning developer tooling, media aggregation and playback, Android automation, connected-device services, data collection, algorithm experimentation and AI-assisted software development.

WHY OMNIRUSH

I want to evaluate state-of-the-art AI models on real engineering work, including repository understanding, code generation, debugging, refactoring, architecture design and agent-assisted development. With extensive hands-on development experience, I can evaluate models based on practical engineering outcomes.
